

PROFESSIONAL SUMMARY

- Around 8+ years of experience as an **Oracle Cloud Applications Analyst** in implementation, customization, and Application support activities of **Oracle Cloud**.
- Extensively worked on various business flows such as **Procure to Pay, Record to Report, Hire to Retire**, and **Order to cash** full cycle.
- Well-Versed with Oracle Cloud ERP & HCM **Security Design, Identity and Access Governance**.
- Commendable implementation of multiple full cycles in Fusion Cloud financials performing **Business requirement gathering, Gap analysis & resolution Analysis, Design and planning, Documentation, Configuration, Testing, GO-live Planning, Post-Production Support, User Onboarding, and Training**.
- Worked on gathering application security **Design requirements** for Oracle Cloud ERP Financials, Supply Chain and HCM Modules
- Prepared design documents, business process documents, orientation guide for UAT, Training documents, Cutover plan, and project plans.
- Conducted workshops with business users and internal audits to establish mitigating and automated controls.
- Implemented Access control measures for Single Sign-On(**SSO**), ensuring only authorized users have access.
- Well-versed with **Cloud Security** and good understanding on **Job Roles, Data Roles, Role Hierarchy, Privileges, data security policies** and **Segregation of Duties**.
- Have actively worked on the **Security console** to create new user accounts, implementation users, Data roles, Duty Roles and custom roles based on the need.
- Key point of Contact for **P2T** refreshes, Data Masking and **Quarterly patch** updates in the environment.
- Worked with **Oracle Support** to create and manage **Service Requests (SRs)** to resolve system defects.
- Identifies **potential process improvement areas** and suggest options and recommended approaches.
- Responsible for writing all documentation in a clear and well-organized manner including **SOPs** and **training** manuals.
- Cloud **conversions** – GL Balances, AP Invoices, AR Invoices, Employees, Suppliers, Open PO, Open Expense Reports.
- Designed **SOD** (Segregation of Duty) matrix to analyze **End User security** conflicts in Oracle Cloud financials for the Cutover plan.
- Designed and enforced security measures for **reporting** and Business Intelligence (**BI**) systems, ensuring data confidentiality and access control. Responsible for maintaining folder **permissions** in **BI** area as per business.
- Worked with **Risk and compliance** team to maintain and deploy risk models and mitigation controls.
- Deployed Fast Path, Deloitte and KPMG **Audit** Catalogs to identify risks, Risk objects, rulesets, **SOD, SA**, Role conflicts.

Oracle Cloud Implementation Specialist

- ✓ **Cloud ERP, HCM Security Upgrade Validation, Support and Extension**
- ✓ **Audit Remediation and best practices**
- ✓ **Security Implementation, support and Redesign**
- ✓ **Month-end Support Reporting-Reconciliation**
- ✓ **Quarterly Patch Management**
- ✓ **Reporting – BIP, SQL Connect, FDI**
- ✓ **Oracle Cloud Infrastructure**
- ✓ **Audit, Risk Management Cloud (FRC,AFC,AAC) and compliance**
- ✓ **End to End Data Conversion expertise for both Meta and Transactional Data**
- ✓ **Proficient in identifying, documenting remediation controls**
- ✓ **Schedule Job Set Processes**

- Developed and conducted **UAT** (User Acceptance Testing) test scenarios and scripts for newly built roles.
- Designed security governance process, role management process, user access review (**UAR**), and access provisioning process.
- Ensured **compliance** with security standards and regulations by regularly auditing access controls, permissions, and configurations.
- Excellent communication skills and leadership qualities with **analytical problem-solving abilities** including playing vital role in coordinating multiple business meetings and following up on open items.

PROFESSIONAL EXPERIENCE

Client: Providence Health & Services, Seattle

Nov 2023- Present

Role: Senior Information Security Analyst

Project Description

This is an Oracle Financials, HCM, SCM security redesign project as per the Audit findings. Designed, documented new roles, remediation controls to remediate the audit findings and mitigate risks as per the business processes.

Responsibilities:

- Collaborated with Role Owners & Controllers to gather security design requirements for Oracle Cloud HCM, ERP Financials and SCM modules, spearheading role customization by tailoring Oracle-seeded roles to align with business objectives.
- Designed, documented, and deployed complete end-to-end HCM applications Security for CoreHR, Compensation, Benefits & Retirements, and Payroll modules in Oracle Cloud applications.
- Led HCM user administration processes, creating and terminating user records, ensuring compliance with organizational policies.
- Deployed custom BIP reports in collaboration with the Oracle SUM team, identifying privileges causing license overages and optimizing usage management.
- Developed sandboxes to enhance user experience, customizing report visibility, info tiles, and fields in invoices to meet specific business needs.
- Built custom roles by retrieving privileges based on Resource Name and Description, aligning with client requirements for enhanced security controls.
- Worked with Oracle Support to create and manage Service Requests (SRs) to resolve system defects.
- Identified and recommended process improvements, leading initiatives that enhanced system efficiency and compliance.
- Maintained comprehensive documentation for access to service accounts within the application and conducted quarterly access reviews to ensure security and compliance in account management.
- Addressed audit findings through remediation efforts, including role modifications such as removing privileges for editing or updating the Chart of Accounts, to enhance security and ensure compliance within the organization.
- Mitigated audit findings in the Payroll HCM module by refining security roles, including revoking access to sensitive payroll processing and configuration tasks, to safeguard employee PII data and maintain compliance with internal controls.
- Designed security governance process, role management process, user access review (UAR), and access provisioning process.
- Mitigated SaaS license overages in current and Static environments by implementing security strategies, including role modifications and user access deprovisioning, while proactively communicating with stakeholders to identify access needs, resulting in optimized access, enhanced compliance, and significant cost savings.
- Served as the key contact for P2T refreshes and quarterly patch updates, ensuring smooth environment transitions and timely updates.

- Redesigned Oracle Cloud security roles to align with client requirements, ensuring adherence to the principle of least privilege for the post-production support team.
- Verified and validated Oracle Cloud solutions throughout the application lifecycle, ensuring best-fit solutions and alignment with industry best practices.
- Configured SQLConnect tool to ensure data security through role-based permissions and compliance with HCM, ERP security standards.

Client: ABM Industries, TX

Aug 2022- Nov 2023

Role: Oracle Cloud Application Security Analyst

Project Description

This is an Oracle Financials Cloud Implementation project. Migration to Oracle cloud for General Ledger, Accounts Receivable, Fixed Assets, Projects, Collections, and Accounts Payable offerings. Key person in gathering business requirements, designing, and deploying critical access setups in Oracle Cloud applications. Worked with role owners and process owners to drive the project toward a new cloud system.

Responsibilities:

- Designed, documented, and deployed complete end-to-end applications for AP, AR, GL, FA, Projects, and Collections modules in Oracle Cloud applications.
- Worked with Role owners & Controllers to gather application security design requirements for Oracle Cloud ERP Financials and HCM modules and actively worked on Role customization by tailoring Oracle-seeded roles as per the Business requirement.
- Worked extensively on Cloud Security and good understanding on Job Roles, Duties, Role Hierarchy, Privileges, data security policies and Segregation of Duties. Created custom roles as per Business Requirements.
- Extensively worked on HCM User creation (Creating person record) and Termination of User records.
- Extensively worked on testing and training users to use FBDI and ADFDI upload methodologies for quick invoice and journal processing using Spreadsheets from Cloud applications.
- Resolved issues with AP Invoice Approval using the BPM tool in Oracle Cloud. To meet client-specific approval routing and incorporated conditions in BPM to skip approval where required.
- Designed SOD (Segregation of Duty) matrix to analyze End User security conflicts in Oracle Cloud financials for the Cutover plan.
- Built Custom Audit Security reports 'Roles and privileges' & 'User roles and details' reports for better tracking of User and Role level Security.
- Worked with Oracle SUM (Subscription Usage Management) team and deployed the custom BIP reports for identifying the privileges causing license Overage.
- Extensively worked on creating Sandbox to customize the visibility of reports and Scheduled processes info tile, payment currency field on invoices, etc.
- Worked with the End users in resolving the issue with the field "Account Address Set" in Oracle Cloud.
- Resolved the issue with users not being able to view contracts in the Projects module.
- Resolved APTB (AP Trial Balance) Report mismatch due to pre-payment applications incorrectly accounted for using the AP Data Validation report for Invoices.
- Tested and trained GL users to use a .exe file for ADFDI installation. Documented the step-by-step training guides for using the .exe file from the shared folder.
- Supported AP Business users during UAT to run the Mass additions process to push Fixed Assets from AP to the Fixed Assets (FA) module.
- Assisted in resolving the issue of Credit Memo not being created from Dispute even though the dispute is approved for Oracle Advanced Collections.
- Designed and implemented solutions, performing system testing and troubleshooting, and providing training and support to manage project-related activities such as project planning, budgeting, and billing.

- Resolved issues related to automatic clearance of receipts, aging bucket reports, credit snapshot reports, and customer statement reports.
- Key point of contact for P2T refreshes and Quarterly patch updates in the environment. Worked with Oracle support to resolve issues during UAT.

Environment: Oracle ERP Cloud Financials R13 (GL, AP, AR, FA, Projects, Advanced Collections, Expenses Cloud), OIC, Smart View, Financial Reporting Studio, Confluence, JIRA, Agile, Share Point, MS Office Suite, OTBI Reports, Oracle Business Intelligence(BIP)

Client: Adapt Health, PA

Jun 2021- August 2022

Role: Oracle Cloud ERP Analyst

Project Description

This is an Oracle Financials Cloud Implementation project. Migration to Oracle cloud for General Ledger and Accounts Payable offerings. Key person in designing, configuring, and deploying critical system setups in Oracle Cloud applications. Worked with stake holders and process owners to drive the project towards new cloud system.

Responsibilities:

- Designed, documented, and deployed complete end to end application for Oracle Cloud Payables and General Ledger.
- Worked with Process owners & Controllers to support and train Fusion functionalities of ERP Cloud Payables, Receivables, Accounting HUB and GL.
- Verify and Validate solutions for Oracle Cloud applications at all stages of lifecycle to advise best fit solutions and best practices for business process in new Cloud system.
- Extensively worked on testing and training users to use FBDI and ADFDI upload methodologies for quick invoice and journal processing using Spreadsheets from Cloud applications.
- Implemented and configured Payables Cloud Offering – Setup and Maintenance Task Lists, Invoice options, Payment options, common options, payment methods, Banks, Payment systems, Payment Templates, transmission configuration, Wallets, SFTP Key based authentication, BPM Approvals.
- Designed and configured complex AP Invoice Approval using BPM tool in oracle Cloud. To meet client specific approval routing and incorporated conditions in BPM to skip approval where required.
- Implemented latest Automated Image processing (AIP) for Users to get rid of current Image Now functionality to scan and send invoices for approval.
- Laid roadmap for most advanced IDR in cloud for processing invoices by automating Invoice creation from invoice image sent via oracle destination email.
- Extensively worked on ad-hoc reporting requests. Automated Request Sets and created Job sets in oracle cloud to schedule and run periodically based on business processes.
- Developed on demand reports using BIP and OTBI for month end period exception handling.
- Supported the team with Postproduction issues. Acted as a maintenance functional support for guiding users understanding the new system and solve daily problems.
- Prepared Design documents, business process documents, orientation guide for UAT, Training documents, Cutover plan, and project plans.
- Developed custom reports in AP: AP Aging Invoice Register for month end reconciliation
- Worked extensively on Cloud Security and good understanding on Job Roles, Duties, Role Hierarchy, Privileges, data security policies and Segregation of Duties. Created custom roles for GL & AP modules.
- Provided end to end Support of Client User onboarding, involving in training and documentation. Created UPKs for user training in core financials.

Environment: Oracle ERP Cloud Financials R13 (GL, AP, Expenses Cloud and Fusion Accounting Hub), OIC, Smart View, Financial Reporting Studio, Confluence, JIRA, Agile, Share Point, MS Office Suite, OTBI Reports, Oracle Business Intelligence, Power BI

Client: Southern Company, GA

Aug 2019 - Jun 2021

Role: Oracle Applications Consultant

Project Description: The Project is mainly focused on support and maintenance of Oracle Cloud Financial Applications, which includes monitoring, troubleshooting, and documentation for Oracle Financial offerings including Payables, Procurement, Assets, Receivables, and General Ledger modules.

Responsibilities:

- Worked on Maintenance Tasks such as new hire access Request, Transfer Requests, and Termination Requests
- Electronic procurement to support purchase requisition generation and approval to support the ordering of goods and services.
- Resolved the approval hierarchy ticket by reassigning the approvals by Creating a Vacation Rule request.
- Ability to generate Purchase Orders (POs) and transmit them to suppliers.
- Payment processing and reconciliation, early payment discount management, and working capital optimization.
- Actively worked on Functional Setup Manager to configure various financial offerings in ERP Cloud as an Implementation consultant.
- Resolved issues related to automatic clearance of receipts, aging bucket report, credit snapshot report, and customer statement report.
- Key resource in oracle patch updates & maintenance.
- Trained and supported users to maintain import errors using ADFDI from the Correct Import spreadsheet
- Designed and Implemented custom BPM process flows for Invoices and PO approvals in Oracle cloud based on Job and serial approvals based on Cost Center.
- Loaded, imported, and auto reconciled the bank statement transaction against payments in Accounts Payable/Accounts Receivables modules.
- Assisted in Month End Period Closing for Oracle Payables by completing transactions, reconciling AP to GL, and Close AP current Period.
- Resolved APTB (AP Trial Balance) Report mismatch due to pre-payment applications incorrectly accounted for using the AP Data Validation report for Invoices.
- User Training for issues like changing BU, and Charge account string not matched.
- Handling tickets such as change of location address on purchase orders billed to/shipped to based on country.
- Good experience with third-party integrations like TM1 and workday for bringing planning and budgeting data to oracle
- Actively worked on the Security console to create new user accounts, implementation users, Data roles, Duty Roles, and custom roles based on the need.

Environment: Oracle ERP Cloud Financials R13 (GL, AP, Expenses Cloud and Fusion Accounting Hub), SQL/PLSQL, FSG Reports, Financial Reporting Studio, OTBI Reports, BI Publisher, Workflow, BPM, Smart View, Agile, Service now, JIRA

Client: Real Consulting Pvt Ltd, India

Apr 2017 – Aug 2019

Role: Oracle Cloud Financials Business Analyst

Project Description As part of the core implementation team, have worked as a systems analyst to document and configure financial cloud applications. During the tenure heavily tested various end to end business processes in SIT and Conversion environments. Supported User On-boarding.

Responsibilities:

- Worked on Configurations, Personalization, Data Security, File-based loaders (FBL), Spreadsheet Loader, Reports Development using OTBI, OBI as required by the business
- Designed and developed PO Print Report, Open AR Balances, Invoices Register, Aging Buckets report by Collector and others.
- Used ADFDI (Application Desktop Framework) extensively to upload/transfer data for GL module

- Documented “AS-IS” and “To-be” process maps as part of the Gap Analysis for new functionality requirements, and thereafter prioritized them in order to align them with the project requirement.
- Documented business processes for General Ledger, Purchasing, Cash Management, Fixed Assets, and Payables.
- Defined Customer Profiles, System Options, Transaction Types, Sources, Accounting Rules.
- Involved in setup for Auto Accounting Rules, Receipt Sources, Receipt Classes, Banks, Bank Charges, Transmission Formats, Aging Buckets, Auto Lock Box, Auto Invoice, Auto Accounting in AR.
- Implemented Security in General Ledger through Functional Security (Job roles) and Data Security (data access sets & and segment value security).
- Scheduled Job set Processes for validating & create accounting of invoices and enable notifications in case of Error.
- Configured Procurement mapping set for Category to expense account to default natural account based on the category in Requisitioning by Business Unit.

Environment: Oracle ERP Cloud Financials R12/R13 (GL, AP, Expenses Cloud and Fusion Accounting Hub, e-Commerce Gateway), OIC, Smart View, Financial Reporting Studio, Confluence, JIRA, Agile, Share Point, MS Office Suite, OTBI Reports, Oracle Business Intelligence
